

Lab 1: Creating a Simple BizTalk Solution using Visual Studio and Exporting an MSI

Exercise:

In this example we will create an Simple BizTalk Solution which can add 2 Integers and use of Orchestration and Maps and Create an MSI from it

Solution:

1. Create 2 Simple Schemas like below

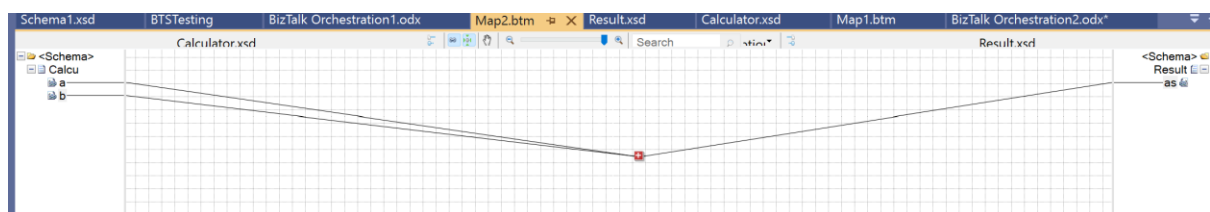

The first screenshot shows the 'Schema1.xsd' file in Visual Studio. The schema is defined as follows:

```
<?xml version="1.0" encoding="UTF-16"?>
<xs:schema xmlns:xs="http://www.w3.org/2001/XMLSchema"
targetNamespace="http://BTSTesting.Calculator" xmlns:
xmlns="http://BTSTesting.Calculator">
  <xs:element name="Calcu">
    <xs:complexType>
      <xs:sequence>
        <xs:element name="a" type="xs:int"/>
        <xs:element name="b" type="xs:int"/>
      </xs:sequence>
    </xs:complexType>
  </xs:element>
</xs:schema>
```

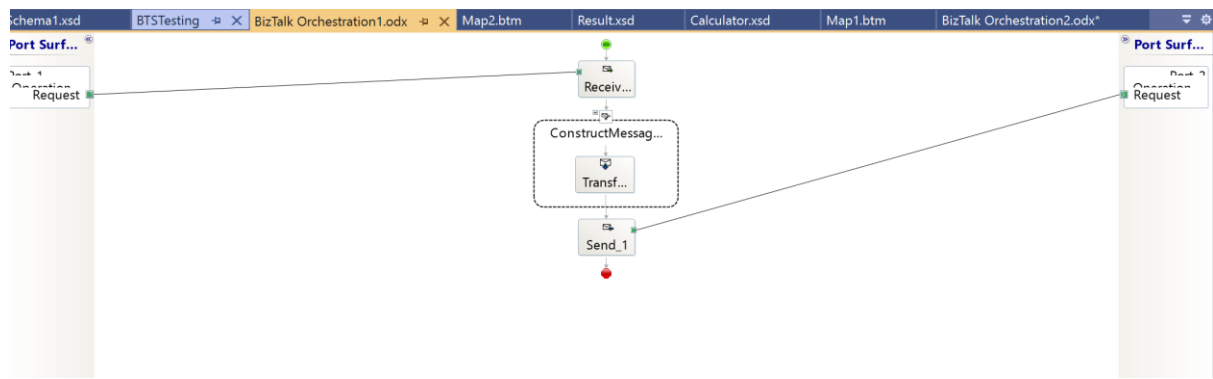

The second screenshot shows the 'Calculator.xsd' file in Visual Studio. The schema is defined as follows:

```
<?xml version="1.0" encoding="UTF-16"?>
<xs:schema xmlns:xs="http://www.w3.org/2001/XMLSchema"
xmlns:b="http://schemas.microsoft.com/BizTalk/2003" xml
  <xs:element name="Result">
    <xs:complexType>
      <xs:sequence>
        <xs:element name="as" type="xs:string"/>
      </xs:sequence>
    </xs:complexType>
  </xs:element>
</xs:schema>
```

2. Create a Map with the above 2 Schemas(Use the addition Functoid)

3. Create an Orchestration Like below

4. Deploy the Solution
5. Export the MSI and Bindings File.
